

Washing Machines with Rotating Baskets

Washing Machines with Rotating Baskets are ideal for cleaning fat, shavings, polishing wastes and grease. Thanks to the charging car, heavy pieces are easily loaded on the rotating platform. It is mainly used in mechanical maintenance and rectification plants. It is often used to clear units which are going to undergo a maintenance or revision from fat and burrs. It can be produced as Washing-Drying, Washing-Rinsing-Drying and Prewashing-Washing-Drying machines with up to 200 mm diameter. We also produce the machines with custom measurements.

Area of use: Maintenance departments of factories, automobile maintenance shops and rectification plants.
